1. System Overview & Architecture

GLIDE is an AI marketing agent built on Claude Code (also known as 'OpenClaw' in the community). It automatically creates, schedules, and posts social media content for GlidenIntelligence across TikTok, Facebook, Instagram, and X/Twitter — and you control it entirely from WhatsApp or the admin dashboard.

Component	What It Does
Claude Code (Agent Engine)	The AI brain. Runs locally on your computer or a server. Reads the GLIDEN_SKILL.md to understand its job.
GLIDEN_SKILL.md	The instruction manual that teaches GLIDE everything about GlidenIntelligence and how to market it.
WhatsApp (via Twilio)	Your communication channel with GLIDE. Text it like an employee.
Admin Dashboard	Web-based control panel to view analytics, approve posts, and chat with GLIDE.
Social Media APIs	TikTok, Facebook Graph API, Instagram Graph API, Twitter API v2.
SQLite Database	Stores all posts, analytics, hooks library, and conversation history.
The Gliden Loop	The automated feedback cycle: create content, post, analyse, improve, repeat.

2. What You Are Building

In simple terms, you are building a digital marketing employee called GLIDE. Here is exactly what it will do automatically:

- Every morning, GLIDE wakes up, checks your analytics from the day before, and figures out what content is working best
- It creates new posts — slideshows, carousels, text posts, threads — tailored to each platform
- For TikTok, it saves drafts to your phone (you just add a trending sound and hit post — 30 seconds of your time)
- For Facebook, Instagram, and X, it can post automatically without you touching anything
- It texts you on WhatsApp when something needs your attention or when a post goes viral
- Every Monday morning, it sends you a full weekly report on WhatsApp
- It continuously learns from what gets views and what does not, improving its content over time

The Gliden Loop

GLIDE follows a continuous improvement cycle: Research what works in your niche → Create content → Post → Analyse performance metrics → Feed results back → Improve and repeat. This is the same system Oliver used to reach 400K+ views on TikTok.

3. Prerequisites & Accounts Needed

Before you start, create accounts on ALL of these services. Most are free to start.
Complete this checklist before moving to Step 1. Each service takes 5-15 minutes to set up.

Service	Why You Need It	Cost
Anthropic API	Powers the GLIDE agent brain (Claude AI)	Pay-per-use. ~$5-20/month typical
Twilio	Sends and receives WhatsApp messages	~$15/month for WhatsApp Business
TikTok Developer	Posts to TikTok and reads analytics	Free
Meta Developer	Posts to Facebook and Instagram	Free
Twitter Developer	Posts to X/Twitter	Free (Basic) or $100/month (Pro)
Node.js (v18+)	Runs the GLIDE server	Free — install from nodejs.org
Claude Code	The agent engine (OpenClaw)	Free from claude.ai/code
A computer/server	Runs GLIDE 24/7 (can be your laptop to start)	Your existing computer is fine to start

Step 1 — Install Claude Code (The Agent Engine)

Claude Code is the application that runs GLIDE locally on your machine. Think of it as the body that GLIDE lives in.

1.1 Install Claude Code

Open your computer terminal (Command Prompt on Windows, Terminal on Mac) and run:

```
npm install -g @anthropic-ai/claude-code
```

Then authenticate with your Anthropic API key:

```
claude
```

It will ask you to log in. Use your Anthropic account (console.anthropic.com). Once logged in, Claude Code is ready.

1.2 Verify the Installation

```
claude --version
```

You should see a version number. If you see an error, make sure Node.js v18 or higher is installed first.

> **What is Claude Code?**
> Claude Code is Anthropic's agentic AI tool that runs on your computer. It can browse the web, run code, manage files, and call APIs — all following instructions from your skill file. The community nickname 'OpenClaw' refers to this tool.

Step 2 — Set Up the GLIDE Agent Files

These are the files that make GLIDE work. You have already received them as part of this package.

2.1 File Structure

```
gliden-agent/ ├── GLIDEN_SKILL.md          ← GLIDE's brain and instructions ├──
server/ │   ├── index.js             ← Main server (WhatsApp + API) │   ├──
social/              ← Platform posting modules │   └── analytics/          ←
Analytics collection ├── dashboard/               ← Admin dashboard ├── memory/
← GLIDE's learning files (auto-created) ├── data/                    ← Database
(auto-created) ├── .env                    ← Your API keys (create from
.env.example) └── package.json
```

2.2 Install Dependencies

Open your terminal, navigate to the gliden-agent folder, and run:

```
cd gliden-agent npm install
```

This installs all required libraries. It takes about 1-2 minutes.

2.3 Create Your .env File

Copy the template file and open it for editing:

```
cp .env.example .env
```

Open the .env file in any text editor. You will fill in each API key in the steps below. Leave them blank for now and come back to add them.

Step 3 — Configure WhatsApp via Twilio

This step connects your personal WhatsApp number to GLIDE so you can talk to it like an employee.

You will use Twilio, which provides a WhatsApp Business API connection. This takes about 20 minutes to set up.

3.1 Create a Twilio Account

1. Go to twilio.com and create a free account
2. Verify your email and phone number
3. From the Twilio Console dashboard, copy your Account SID and Auth Token
4. Add these to your .env file:

```
TWILIO_ACCOUNT_SID=ACxxxxxxxxxxxxxxxxxx TWILIO_AUTH_TOKEN=your_token_here
```

3.2 Set Up WhatsApp Sandbox (for Testing)

5. In the Twilio Console, go to Messaging → Try it Out → Send a WhatsApp message
6. You will see a sandbox number (e.g. +1 415 523 8886) and a join code (e.g. 'join green-apple')
7. From YOUR WhatsApp, send that join code to the sandbox number
8. You are now connected to the sandbox for testing
9. Add to your .env file:

```
TWILIO_WHATSAPP_NUMBER=+14155238886 OWNER_WHATSAPP_NUMBER=+2348012345678
```

3.3 Set Up the Webhook

GLIDE needs Twilio to forward incoming WhatsApp messages to your server. You need a public URL. Use ngrok for local development:

```
npm install -g ngrok ngrok http 3001
```

Copy the https URL that ngrok gives you (e.g. https://abc123.ngrok.io). In Twilio Console:

10. Go to Messaging → Settings → WhatsApp Sandbox Settings
11. Set 'When a message comes in' to: https://abc123.ngrok.io/webhook/whatsapp
12. Save

Production Note

For production (running 24/7), deploy the server to a cloud host like Railway, Render, or a DigitalOcean droplet and use that URL instead of ngrok. Railway.app is the easiest — it costs about $5/month.

Step 4 — Connect Your Social Media Platforms

4.1 Facebook & Instagram (Meta)

Facebook and Instagram share the same API (Meta Graph API). You need ONE developer account for both.

13. Go to developers.facebook.com and create an app (choose 'Business' type)
14. Add the 'Pages' product to your app
15. Go to Graph API Explorer: graph.facebook.com/explorer
16. Get a Page Access Token for your GlidenIntelligence Facebook Page
17. Convert it to a Long-Lived Token (it lasts 60 days) by calling:

```
https://graph.facebook.com/oauth/access_token?   grant_type=fb_exchange_token&
client_id=YOUR_APP_ID&   client_secret=YOUR_APP_SECRET&
fb_exchange_token=YOUR_SHORT_TOKEN
```

18. Find your Facebook Page ID: go to your Facebook Page → About → Page ID
19. Find your Instagram Business Account ID: call the API at /me/accounts, then /PAGE_ID?fields=instagram_business_account
20. Add all values to your .env file

4.2 TikTok

TikTok's API is specifically for content creators and businesses.

21. Go to developers.tiktok.com and create an account
22. Create a new app and apply for the Content Posting API
23. Add your TikTok account as a sandbox user initially for testing
24. Generate an access token through the OAuth flow
25. Add TIKTOK_ACCESS_TOKEN and TIKTOK_OPEN_ID to your .env file

TikTok Draft Mode (IMPORTANT)

As Oliver explains in the podcast: NEVER post to TikTok directly via API. TikTok treats API posts as bot content and gives them low reach. Instead, GLIDE saves posts as DRAFTS. You get a WhatsApp notification, open TikTok on your phone, add a trending sound, and hit publish. This takes about 30 seconds and massively improves your reach.

4.3 X / Twitter

26. Go to developer.twitter.com and apply for developer access (free Basic tier is sufficient)
27. Create a new app in the developer portal
28. Set permissions to 'Read and Write'
29. Generate API Key, API Secret, Access Token, and Access Secret
30. Copy your Bearer Token as well

31. Add all five values to your .env file

Step 5 — Set Up the Admin Dashboard

The admin dashboard is a web application you open in your browser to see analytics, manage posts, and chat with GLIDE.

5.1 Install Dashboard Dependencies

```
cd gliden-agent/dashboard npm install
```

5.2 Configure the Dashboard

Create a file called .env.local in the dashboard folder:

```
VITE_API_URL=http://localhost:3001
```

5.3 Start the Dashboard

```
npm run dev
```

Open your browser and go to http://localhost:3000. You should see the GLIDE admin dashboard.

5.4 Dashboard Features

- Overview dashboard with total views, posts, engagement, and signups
- Platform performance breakdown (TikTok vs Facebook vs Instagram vs X)
- Content queue — review drafts, approve posts, post now
- Content generator — tell GLIDE what to create
- Hook library — see every hook tested, ranked by average views
- Analytics — weekly and monthly performance trends
- Chat with GLIDE — same as WhatsApp but in your browser
- Settings — toggle auto-posting per platform, pause agent, configure behaviour

Step 6 — Configure GLIDEN_SKILL.md

This is the most important step.

The GLIDEN_SKILL.md is the document that teaches GLIDE everything about GlidenIntelligence. Without it, GLIDE is just a generic AI. With it, GLIDE becomes a dedicated marketing expert for your specific product.

Open the GLIDEN_SKILL.md file in any text editor and fill in the sections marked with [OWNER: fill in]:

Field	What to Write
Product description	In 2-3 sentences, what does GlidenIntelligence do? Who is it for?
Target audience	Who are your ideal users? Age, job role, pain points.
Core value proposition	What is the #1 thing GlidenIntelligence does better than anything else?
Website/app link	The URL you want people to visit (your homepage or app store link)
Key features	List the 3-5 features you most want to showcase in content

6.1 Example (Fill in Your Own Values)

```
Product: GlidenIntelligence is an AI-powered business analytics platform that
turns raw company data into clear, actionable insights in minutes. Built for
Nigerian SME owners, startup founders, and operations managers.  Target Audience:
Business owners aged 28-45, overwhelmed by spreadsheets, making important
decisions without reliable data. Time-poor, tech-comfortable.  Core Value: Replace
gut-feel decisions with real AI intelligence — without hiring a data analyst.
Website: https://glidenintelli.com  Key Features: Automated reports, anomaly
detection, revenue forecasting, team performance dashboards, WhatsApp report
delivery
```

Step 7 — First Run & Testing

7.1 Start the GLIDE Server

Open a terminal in the gliden-agent folder and run:

```
npm start
```

You should see the GLIDE startup message. Within 30 seconds, GLIDE will send your WhatsApp a greeting message.

7.2 Test WhatsApp Communication

Open WhatsApp on your phone and send these test commands to the Twilio number:

Send This	GLIDE Will Do This
status	Shows how many posts, views, drafts, and whether posting is paused
Morning brief	Gives you yesterday's analytics and today's plan
Create this week's TikTok content	Generates 7 TikTok slideshow posts and saves them as drafts
What's working?	Analyses top performers and tells you why they worked
Pause	Stops all automated posting immediately
Resume	Restarts automated posting
Analyse Instagram	Deep dive into Instagram's performance this month

7.3 Generate Your First Content

Send this message to GLIDE on WhatsApp:

```
"Create 3 TikTok slideshow posts for GlidenIntelligence. Focus on how AI can help
Nigerian business owners make better decisions. Use the curiosity reveal hook
format."
```

GLIDE will create the content, save it as drafts, and send you a WhatsApp confirmation. Then check your admin dashboard to see the drafts in the content queue.

11. Daily Operations — Talking to GLIDE

Once GLIDE is running, your daily workload is minimal. Here is a typical workflow:

Time	Action	Details
8:00am (auto)	**GLIDE morning brief**	GLIDE automatically sends you a WhatsApp with yesterday's best post, today's content plan, and any flags.
8:05am (you)	**Approve TikTok drafts**	Open TikTok, go to drafts, add a trending sound, and hit post. 30 seconds per post.
As needed (you)	**Chat with GLIDE**	On WhatsApp or dashboard. Ask for new content, check analytics, request strategy changes.
Daily (auto)	**GLIDE posts content**	Facebook, Instagram, X/Twitter are posted automatically (if auto-post is on).
6-hourly (auto)	**Analytics collection**	GLIDE pulls metrics from all platforms and updates the database.
Monday 9am (auto)	**Weekly report**	WhatsApp summary of the full week: top posts, what worked, what to change this week.

12. The Gliden Loop Explained

The Gliden Loop is the automated learning cycle that makes GLIDE smarter over time.

Just like Oliver's 'Larry Loop', the Gliden Loop feeds analytics back into content creation — so GLIDE learns what works and doubles down on it automatically.

#	Phase	What GLIDE Does
1	Research	Checks what hooks and formats are trending in the AI/business niche. Reviews your analytics history to find patterns.
2	Create	Generates content (slides, carousels, posts, threads) using the best-performing hook formulas. Adapts content for each platform.
3	Post	Sends TikTok drafts to your phone. Posts to Facebook, Instagram, X automatically. Notifies you via WhatsApp.
4	Analyse	Checks views, likes, comments, shares, and link clicks after 24h, 48h, and 7 days from each post.
5	Iterate	If views are low: change the hook. If views are high but no clicks: improve the CTA. If clicks but no signups: flag it to you. Doubles down on winners, kills losers.

13. Troubleshooting

Problem	Solution
WhatsApp not receiving messages	Check that your ngrok URL is still active and updated in Twilio console. ngrok URLs reset every 8 hours on the free plan — use a paid plan or deploy to a real server.
GLIDE not responding	Check your terminal for error messages. Verify ANTHROPIC_API_KEY is correct in .env. Restart the server with: npm start
TikTok posts not appearing in drafts	TikTok API for draft creation requires specific permissions. Until approved, use GLIDE to generate the content text and create the slides manually in TikTok's native app.
Facebook API token expired	Facebook Page tokens expire after 60 days. Regenerate a long-lived token from the Graph API Explorer and update your .env file.
GLIDE gives generic content	The GLIDEN_SKILL.md needs more detail about GlidenIntelligence. The more specific you are in that file, the better the content becomes.
Server crashes on startup	Run: npm install to make sure all dependencies are installed. Check that all required .env values are filled in.
Dashboard not loading	Make sure both servers are running: npm start (port 3001) and npm run dev in dashboard folder (port 3000).

14. Cost Summary — Running GLIDE

Here is a realistic monthly cost breakdown for running GLIDE in production:

Service	Monthly Cost	Notes
Anthropic (Claude API)	$10 – $30	Depends on how much content you generate. ~$0.003 per message.
Twilio WhatsApp	$15	Fixed monthly fee for WhatsApp Business API.
Server hosting (Railway.app)	$5	Runs GLIDE 24/7 in the cloud.
Twitter API (Basic)	Free	Sufficient for most needs. Pro is $100/month.
TikTok, Facebook, Instagram APIs	Free	No cost for standard API access.
TOTAL ESTIMATE	**$30 – $50/month**	Well below the value of one good viral post driving signups.

You are ready to launch GLIDE

Your GlidenIntelligence marketing agent will run 24/7, creating content, posting, learning, and improving — while you focus on building your product.

Next Step: Send Your First WhatsApp

Once your server is running, send this to GLIDE on WhatsApp: 'Morning brief — let's get started on GlidenIntelligence content.' GLIDE will introduce itself and ask you what you want to focus on first.
